WEATHER

WEATHER SYNOPSIS BY REGION:

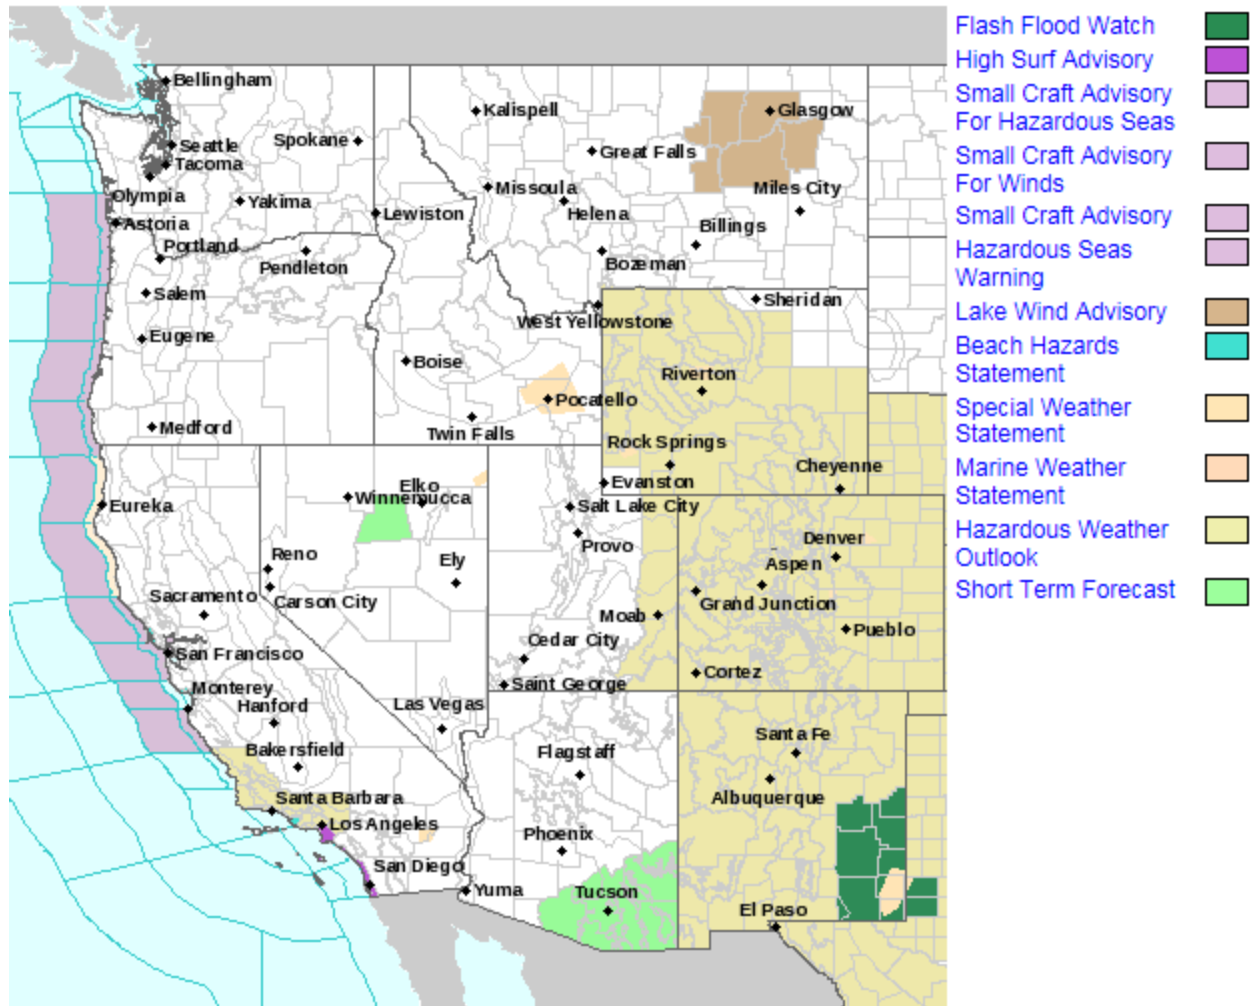

Northern Region

A weak trough over the west coast will bring a slight threat of mountain crest thunderstorms over the next few days. Otherwise slightly cooler daytime temperatures and slightly higher relative humidity are expected. An upper level low dropping out of the Gulf of Alaska and over northern California will bring an increasing chance of mountain thunderstorms Wednesday with some foothill or even valley thunderstorms possible Thursday. Daytime highs will cool to near normal by Thursday with more moderate relative humidity. Winds generally light through the week except gusty at times through the Delta.

Southern Region

A weak low pressure system off the California coast will move inland through southern California on Monday. This will bring cooling and increasing humidities as the marine layer deepens and onshore flow strengthens. There is also a slight chance of afternoon and early evening thunderstorms on Monday mainly for the mountains. Onshore flow will continue through Friday as a colder low pressure system over the Great Basin brings below average temperatures for inland areas, gusty west winds in the mountains and deserts. There will be chances for mainly light precipitation along and west of the mountains Thursday and Friday. It will be dry and a little warmer for Saturday under the weak high pressure.
